LANGUAGE

- English (B2-C1)
- Polish (native)
- French (C1-C2)
- Dutch (B1)

PROJECTS

Spreadsheet (Analysis and Conception)

- Using Java, JavaFX library and MVVM architecture, I built a spreadsheet like Excel with cell recursion, math precedence order (PEMA) and import/export of the spreadsheet in a custom format given by the school. Used Builder design pattern.

Custom Form (project management techniques)

- Using Java, Lanterna framework and MVC architecture, I built an application that works as a form with questions/answers. Owner of the questions and users who respond to it (checkbox with one or multiple responses, percentages of the most picked response, response input space). This project was more about managing Git and Trello (creating branches for each feature, comitting, merging, deleting, tagging a commit, ...)

E-commerce website (Web Development)

- Using PHP as backend, school framework, MVC architecture, MySQL as database, I built an e-commerce website with option to bid/buy, search bar for items, filter by name of buyer/item category, ... Used AJAX requests, JavaScript and Post-Redirect-Get design pattern.

Restaurant Reservation app (Database management)

- Using Dart, Flutter Framework, PostgREST as REST API and PostgreSQL as database/server, JWT tokens for authentication, I built a restaurant reservation app with restaurants, services, managers and clients. The backend is managed by PostgreSQL scripts, frontend is managed by Flutter.

Industrial network (Network Security)

- Using Virtual Box and pfSense, I built a WAN (physical PC), LAN (Windows 10 and Windows Server 2019), DMZ (Ubuntu Server). Used Active Directories (AD), Organizational Units (OU) and Group Policy Objects (GPO).

TECHNICAL SKILLS

- Languages : Java, Python, PHP, Dart, JavaScript, SQL.
- Frameworks & Architecture : Flutter, JavaFX, Lanterna, MVC, MVVM, PostgREST
- Tools & Network : Git, Trello, Postman, VirtualBox, pfSense, Active Directory, SAP Business One, DBeaver
